

## **R** Rosedale Accessories

### **Heated Jacketing For Resins, etc.**

All Rosedale filter housings can be fitted with heated jacketing for improved filtration of resins, adhesive coatings, and viscous materials. The entire vessel can be enclosed by the jacketing, including the inlet and outlet nozzles. The unit is rated to 600°F, requiring metallic seals (included). The housing is electropolished to prevent product buildup, maintaining clean inside walls.

### **Bag Hold Down Assemblies**

Hold down assemblies can be supplied with any Rosedale filter housing.

### **Internal Coatings**

Special coatings can be internally applied to any of Rosedale's housings, meeting your special requirements. These coatings include epoxy, with other coatings available. Call Rosedale for more information or product compatibility.

### **Bag Restrainer**

This restrainer expands the bag fully during filtration, insuring that it doesn't fold over on to itself, reducing the amount of material used in filtration. It can also be used in conjunction with the liquid displacer, easing its installation.
