I. Installation

Please remove all shipping and crating materials carefully. Be sure to remove the plugs from the inlet and outlet openings. Dispose of all crating materials safely.

After positioning the Model 8-125 Duplex Filter unit in its proper location, secure the adjustable tripod leg assemblies to the floor or platform. (Some installations may not require the adjustable tripod leg assemblies.)

The duplex system is normally supplied with the inlet-outlet connections in a horizontal orientation (facing in opposite directions) as shown on the last page of this manual. However, the inlet-outlet orientations can be varied depending on your application.

The inlet service line should be connected to the inlet flange or NPT coupling located near the top of the units (above basket level).

The outlet service line should be connected to the outlet flange or NPT coupling, located near the middle or bottom of the units (below basket level).

There are two 1/4” NPT ports, one on the inlet tee and one on the outlet tee, of the Model 8-125 Duplex Filter unit. Additionally, there is one 1/4” NPT port in each cover of the Model 8-125 Duplex Filter unit. These ports can remain plugged or used for pressure gauges, or special fittings as your application requires.

Some installations require electrical grounding of all equipment, be sure to provide adequate grounding where necessary.

After completing installation be sure to double check connections for integrity. Your Model 8-125 Duplex Filter unit has been factory pressure tested leak free, therefore, any seepage problems usually occur from improper installation connections.

You are now ready to install the filter basket and bag. Remove cover by loosening the T-bolt clamp sufficiently to allow removal of the clamp assembly.

Place the basket into the filter housing, make sure the basket flange is firmly seated onto the step on the inside of the housing.

Insert bag into the bag basket making sure filter bag ring is firmly seated against the top of the basket flange. For best results, be sure filter bag is installed fully extended to the bottom of the basket.

Before replacing cover and clamp assembly, inspect cover seal gasket (replacing as necessary). Replace cover and tighten the T-bolt clamp assembly to ensure a leak proof seal between the cover and housing body.

Your Rosedale Model 8-125 Duplex Filter unit is now ready for operation!
II. Operation

Filter System Start-Up Procedure:

Prior to turning on the flow to the inlet service, please make the following checks:

1. Check inside filter unit to be sure basket and filter bag (if applicable) are in housing and do not require cleaning or replacement. If necessary install a clean filter basket and bag (if applicable).

2. Check that filter unit cover is securely fastened to housing. You are now ready to open the flow to the inlet service line. Slowly open the inlet service line approximately 25% of normal operational flow (open slowly as not to displace filter bag inside the housing). After filter unit is pressurized and vented, slowly open outlet service line unit valve until completely open. Complete opening of inlet service line until desired flow rate is reached.

Once the desired service flow has been established, the filter will operate efficiently until dirty. However, under no circumstances should more than **15 PSI Differential Pressure** through the filter be obtained. Operating the filter unit with a high differential may cause filter bags to rupture and/or cause damage to filter system and downstream equipment.

To prevent excessive drop through the filter unit, regular inspection of the filter media is required. Monitoring of differential pressure through the housing can be utilized as a means of determining whether or not the filter media needs cleaning or replacement.

Filter Media Cleaning/Replacement Procedure (Side of duplex not in service):

The duplex system features continuous filtering capabilities. When it becomes necessary to clean or replace filter media during continuous operating conditions, follow the procedure outlined below:

1. Open balancing valve, if applicable, to equalize pressure in both housings.
2. Unlock mechanical valve actuator assembly by removing the lynch pin.
3. Slowly move the mechanical actuator lever 90° to divert the flow to the clean filter vessel.
4. Replace lynch pin to prevent accidental switching of fluid flow to filter being serviced.
5. Close balancing valve, if applicable.
6. Relieve the pressure from the filter vessel being serviced.

**WARNING**

CONTENTS UNDER PRESSURE

Relieve Pressure in accordance with Manufacturer's instructions before opening Filter Vessel.

FAILURE TO DO SO MAY RESULT IN SERIOUS BODILY INJURY.

7. Drain housing sufficiently to access filter basket.
8. Remove cover by loosening the T-bolt clamp sufficiently to allow removal of the clamp assembly.
9. Remove filter basket and clean thoroughly, remove the filter bag (if applicable) and throw away. (Cleaning and reusing the filter bag is not recommended.)
10. Remove debris and sludge from inside the inlet portion of housing to avoid interference with cover seal or flow of fluid being filtered.
11. Install clean filter basket and filter bag (if applicable). Place the basket into the filter housing.
make sure the basket flange is firmly seated into the basket collar. If applicable, insert bag on top of the bag basket flange making sure filter bag ring is firmly seated inside the basket flange. For best results, be sure filter bag is installed fully extended to the bottom of the basket.

12. Inspect cover gasket for cuts or other signs of failure and make sure it is properly seated.
13. Replace cover and tighten the T-bolt clamp assembly to ensure a leak proof seal between the cover and housing body.

Your Rosedale Model 8-125 Duplex Filter unit is now ready for continuous operation during the next filter media cleaning/replacement maintenance cycle.

III. Spare Parts List

Your Rosedale Model 8-125 Duplex Filter unit will give you many years of reliable service provided periodic inspections are made of various components and replacement of worn parts are made promptly. The following is meant to be a recommended spare parts list, these parts are illustrated on the following page.
